Profiles

P802D is a differential pressure transmitter with a big HD LCD/LED display, designed for monitoring pressure or differential pressure in industrial and OEM applications, including electrical power, environmental protection, dust removal, textile, leakage detection and etc..

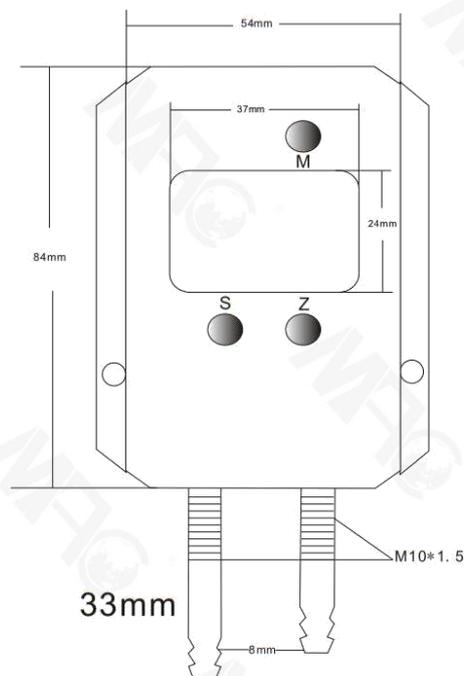

It adopts imported chip and is made by advanced technology and processes. The circuit linearity and temperature compensation technologies make it better performance. It is compact with stable structure and light weight. This product is suitable for measurement of various dry and non-corrosive gases with high measurement accuracy.

Besides, its installation is very simple. There are M4 screw mounting holes on both sides of the housing, and the air nozzle is also threaded. The user can choose to fix it with screws or M10×1.5 nuts.
